Office Location

22 Old Concord Tpke
Barrington, NH

Class dates

TBD

Course Overview

This course is a hand applied splicing course. It will be 3-12 hour days. When you are finished with this class you will be eligible to take Module 2, and then module 4. National Grid along with other customers, require that in order to bid and/or work on their underground, you will need this certification. It is a big commitment to give up 3 days to get this, so please if you sign up do your best to keep your commitment, as it is hard to get someone to fill your spot on a last minute notice. If you are an apprentice you will be scheduled through your usual classes. This class is currently offered to only Journeyman Lineman and Cable splicers at this time.

Required Tools

No tools are required to bring, they are supplied. If you would like to bring a pair of nines and a ruler they come in handy.

Accommodations

If you live over two hours from the Barrington Hall, we will provide a hotel room for you. Please check with Mick Van Natta when you sign up.
